Indeed, as many previous theorists have suggested, there may have been a prelinguistic ancestral group that possessed significant mimetic capacities probably including vocalizations used in communication and coordinated action, and the drive Religion in Human Evolution expand these capacities may have been one of the important drivers of the development of more articulated languages. If we read this book, adherents of every modern religion--especially Jews, Christians, and Muslims--will find vast new reasons for gratitude for our ancestors human and extra-human. We are, according to Bellah, still living within the axial frame; this book is part of its legacy.
