Although application of nematicides often is profitable on high-value crops such as tomato, pepper, eggplant, and strawberry, application often is not cost effective in lower-value crops. Currently, corn and soybean production, occupying the largest percentage of crop acreage in the United States, dominate pesticide use. Millardet discovers value of the Bordeaux mixture.

Florida is a test state to transfer much land into government hands, for the good or recreation of the people. If indigenous biological-control organisms are destroyed by sterilization or fumigation of soil, for example, an unaffected indigenous or an introduced pathogen can cause far more damage than would be possible in untreated soil. Policies for an Aging Society. Acquisitionofantibioticresistanceisoftenasassociatedwithbiological resistance is a consequence of evolution via natural selection.
