In the coalescence or growth stage, partially wetted primary particles and larger nuclei coalesce to form granules composed of several particles. The desired attributes of the granule are controlled by a combination of the formulation and the process. Pharm Dev Technol ; 5 4 –

Moreover, the direct application of rheological models to the entire compaction process. It is important to keep in mind that the porosity e in equation 24 corresponds to the total porosity of the empty matrix. Commercial Manufacturing and Product Quality Abstract By knowing the characteristic peaks for each component in the formulation, it is possible to do analysis of each mm square and see which components are present in that region. If you wish to place a tax exempt order please contact us. Share your review so others can benefit. The processing for the agglomeration of primary particles depends on proper control of the adhesional forces between particles, which encourage agglomerate formation and growth and provide adequate mechanical strength in the product.
